DA-19 | Weekly Business Performance Summary

AccioJob · Spin Build Pitch · Data Analytics Project | Reporting basis: All-time dashboard, with a December year-over-year comparison

TOTAL SALES	TOTAL PROFIT	TOTAL ORDERS	QUANTITY SOLD
$2.27M	**$282.86K**	**5,000**	**37,000**

Profit margin	Average order value	Average profit / order	Average profit / unit
12.46%	$454	$56.57	$7.64

1. Executive summary

The business generated approximately **$2.27 million in sales** and **$282,860 in profit**, across approximately **5,000 orders** and **37,000 units sold**. The calculated overall profit margin is approximately **12.46%**. Weekly sales show a fluctuating pattern, with increases in some weeks and decreases in others. Separately, the selected year-over-year comparison shows that **December 2014 sales were approximately 17% lower than December 2013**.

2. Sales trend findings

Measure	Finding	Interpretation
Weekly sales	**Fluctuating**	Sales rise in some weeks and fall in others; the overall direction needs to be assessed using the full trend.
December YoY	**-17%**	December 2014 sales were about 17% below December 2013, based on the Power BI comparison.

3. Key business observations

• Overall sales and profit indicate meaningful business activity, with a calculated profit margin of 12.46%.

• Week-to-week fluctuations suggest that sales are not consistently moving in one direction.

• The 17% December year-over-year decline is a specific period comparison; it does not establish that every month or the full year declined.

• Category-level and regional results are still needed to identify the main contributors to the December decline.

4. Recommended actions

• **Investigate the December decline:** compare category, product and region sales for December 2013 versus December 2014.

• **Review weekly volatility:** identify weeks with the largest sales increases and decreases, then check which products or regions drove them.

• **Protect profitability:** examine product margins, discounting and high-volume/low-profit items before making pricing changes.

5. Data notes and limitations

The $2.27M sales, $282.86K profit, 5,000 orders and 37,000 units represent the all-time dashboard figures provided for this report. The 12.46% margin and average-value metrics are calculations from those rounded inputs. The -17% figure refers specifically to December 2014 compared with December 2013. Weekly trend classification was provided as fluctuating. Category and regional leaders, exact weekly values, and causes of the decline were not supplied, so no specific product, region or cause is asserted.

Prepared for the DA-19 business reporting project. Figures are approximate where source inputs were rounded.
